NumPy Exercises

Bala Murugan V V

21BIT0725

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

Import NumPy as np

```
In [4]: import numpy as np
```

Create an array of 10 zeros

```
In [6]: arr = np.zeros(10)
arr
```

Out[6]: array([0., 0., 0., 0., 0., 0., 0., 0., 0.])

Create an array of 10 ones

```
In [ ]: arr1 = np.ones(10)
Out[ ]: array([ 1.,  1.,  1.,  1.,  1.,  1.,  1.,  1.])
```

Create an array of 10 fives

```
In [8]: arr5 = np.ones(10)*5
arr5

Out[8]: array([5., 5., 5., 5., 5., 5., 5., 5.])
```

Create an array of the integers from 10 to 50

Create an array of all the even integers from 10 to 50

```
In [16]: np.linspace(10,50,21)
```

9/6/23, 7:26 PM Numpy Exercise

```
Out[16]: array([10., 12., 14., 16., 18., 20., 22., 24., 26., 28., 30., 32., 34., 36., 38., 40., 42., 44., 46., 48., 50.])
```

Create a 3x3 matrix with values ranging from 0 to 8

Create a 3x3 identity matrix

Use NumPy to generate a random number between 0 and 1

```
In [27]: np.random.rand()
```

Out[27]: 0.374669686676087

Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

Create the following matrix:

```
In [38]: arr = np.arange(0,1,0.01)
    arr.reshape(10,10)
```

9/6/23, 7:26 PM Numpy Exercise

Create an array of 20 linearly spaced points between 0 and 1:

Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
In []: mat = np.arange(1,26).reshape(5,5)
         mat
 Out [ ]: array([ [ 1, 2, 3, 4, 5 ],
                [6, 7, 8, 9, 10],
                [11, 12, 13, 14, 15],
                [16, 17, 18, 19, 20],
                 [21, 22, 23, 24, 25]])
 In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [31]: mat = np.arange(1,26).reshape(5,5)
         mat[2::,1::]
Out[31]: array([[12, 13, 14, 15],
                [17, 18, 19, 20],
                 [22, 23, 24, 25]])
 In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [32]: mat[3,4]
Out[32]: 20
```

9/6/23, 7:26 PM Numpy Exercise

```
In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [34]: mat[0:3:,1].reshape(3,1)
Out[34]: array([[ 2],
                [7],
                [12]])
 In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [35]: mat[4]
Out[35]: array([21, 22, 23, 24, 25])
 In [ ]: # WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
         # BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
         # BE ABLE TO SEE THE OUTPUT ANY MORE
In [36]: mat[3::]
Out[36]: array([[16, 17, 18, 19, 20],
                [21, 22, 23, 24, 25]])
         Now do the following
```

Get the sum of all the values in mat

```
In [39]: np.sum(mat)
Out[39]: 325
```

Get the standard deviation of the values in mat

```
In [41]: np.std(mat)
Out[41]: 7.211102550927978
```

Get the sum of all the columns in mat

```
In [40]: np.sum(mat,axis = 0)
Out[40]: array([55, 60, 65, 70, 75])
```
